MFA device name
Device name
This name will be used within the identifying ARN for this device.
Harshitha AWS
Maximum 64 characters. Valid characters: A-Z, a-z, 0-9, space + = , @ . _ (hyphen).
MFA device
Device options
In addition to username and password, you will use this device to authenticate into your account.
Passkey or security key
Authenticate using your fingerprint, face, or screen lock. Create a passkey on this device or use another device, like a FIDO2 security key.
AWS recommends using a passkey or security key as an MFA device so they provide the most protection against attacks such as phishing.

Authenticator app
A virtual MFA device is an application running on your device that you can configure by scanning a QR code.
1
Install a compatible application such as Google Authenticator, Duo Mobile, or Authy app on your mobile device or computer.
See a list of compatible applications
2
Open your authenticator app, choose Show QR code on this page, then use the app to scan the code. Alternatively, you can type a secret key. Show secret key
3
Type two consecutive MFA codes below
Enter a code from your virtual app below

Root user has MFA
Having multi-factor authentication (MFA) for the root user improves security for this account.
You have MFA
Having multi-factor authentication (MFA) for the root user improves security for this account.
Your user, Harsh18Bharatben, does not have any active access keys that have been unused for more than a year
See best practices for deleting unused access keys to improve security.
